STATIC SHIFT GAME INSTRUCTIONS

When the game begins, the maintenance robot, five energy cells, and a security drone will be on the screen. The player moves the robot around the facility using the arrow keys on their keyboard. The robot must touch the energy cells to collect them while staying away from the security drone. Each collected energy cell adds one point to the player's score. The score and remaining lives will be displayed on the screen throughout the game.

PLAYER CONTROLS

- Up Arrow: Moves the robot up, jumping.
- Down Arrow: Moves the robot down.
- Left Arrow: Moves the robot left.
- Right Arrow: Moves the robot right

Game Characters and Objects

Maintenance Robot: The robot is the character controlled by the player. It can move in four directions using the arrow keys. Its objective is to collect the energy cells while avoid the security drone.

Energy Cells: These are the five collectible objects placed throughout the facility. When the robot touches one, it disappears, a sound effect plays, and the player's score increases by one point.

Security Drone: The drone is the enemy that automatically moves back and forth across the facility. When the drone touches the robot, the player loses one life, and a sound effect plays. If any lives remain the robot will return to its starting position.

Scoring and Lives

The player begins with three lives and a score of zero. Each energy cell collected adds one point to the score, with a maximum of 5. If the player collides/touches the security drone one life is lost.

Winning and Losing

The player wins by collection all five energy cells before losing all 3 lives.
The player loses if they lose all three lives.
